

The Intelligent Web-based Management System for your Core Facility

Unlimited Flexibility... Endless Possibilities...

Bespoke Configuration

All Calpendo systems are built solely with the individual client in mind. With a dedicated customer support specialist provided for each account, the configuration and set up of a system is never left to chance. Exprodo Software design, build and import all data on behalf of the clients, all at no extra cost.

Project & User Management

Bespoke controls and permissions can be set for all individuals and user groups, whilst all information on each project (and the users involved) can be tracked and analysed through Calpendo. Calpendo can also automatically manage project usage limits, start/end dates, safety regulations and accounting information.

Reporting & Tracking

All data in Calpendo can be searched and analysed using the flexible reporting tool. This gives users the ability to monitor such things as booked vs actual usage or the financial income in a given period per resource. Once created, a report can be set up to run and be exported for future use on demand.

Automated Email & Billing

Calpendo's automated features include the ability to run and export reports, configure and send billing information as well as set up automated notifications for cancellations or broken resources. These can be set up as reminders or reports and provide instant, admin-free support for all users and administrators.

Can your Core Facility keep up? Choosing the right system to manage your facility is critical to ensure you track and optimise the use of your resources and maximise efficiency for users and managers alike. Does your system do this? Calpendo does.

Who uses Calpendo?

Calpendo is currently used in a multitude of facilities across the globe. From Europe to Asia, Africa to North America, Calpendo has benefitted core facilities with its flexibility, functionality and intelligence. An example of just some of the core facility types that use Calpendo are:

- Microscopy Facilities
- Radiology Facilities
- Genomics Laboratories
- Psychology Institutes
- Crystallography Facilities
- Research Hospitals
- Institutes of Psychiatry
- Brain Imaging Centres
- Positron Emission Tomography (PET)
- Magnetoencephalography (MEG)
- Magnetic Resonance Imaging (MRI)
- Flow Cytometry Facilities
- Medical Centres
- Light Microscopy Facilities

However, if there is an additional feature you would like, all you need to do is ask!

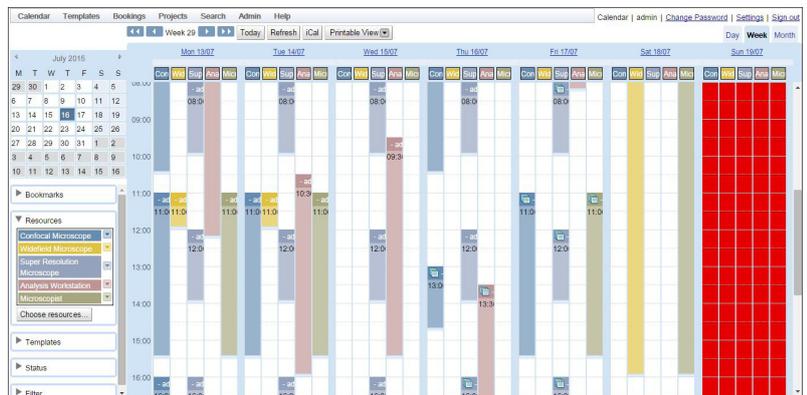

“Calpendo just works. Totally excellent. I couldn’t be happier with it!”

Dr Ben Inglis, UC Berkeley, USA
Calpendo client since 2011

The Calpendo Solution For Core Facility Management

Simplistic calendars can be sufficient when core facilities have few bookings because the time and administrative overhead is small. However, as the core facility grows, these problems can escalate in a non-linear way.

Calpendo is consistently recognised as the best-in-class management system by providing a solution that is easy to use with powerful, intelligent controls that are configurable to the needs of individual core facilities. Calpendo can apply specific rules and permissions to avoid facility administrators having to manually deal with every request.

Calpendo has unlimited flexibility, meaning that when a Calpendo system is set up, it is done to meet and exceed the exact needs and requirements of the customer and their core facility.
